

# *The SideTracker* *Eliminate the* *No Zone !*

## **Eliminate the No Zone!**

Nearly half of reported tractor trailer accidents occur in the blind spot "No Zone" on the right side of the vehicle.

The SideTracker wide angle camera sends a real time picture to a dash mounted monitor and provides a high resolution view of the entire "No-Zone", extending beyond the back of the trailer as well as several lanes to the right...even entrance ramps.

- *No more distorted images*
- *No more blind spot*
- *No more "No Zone"*

The SideTracker camera is mounted in a rugged, corrosion resistant housing with a patented vortex generator design that helps keep rain, snow and debris from affecting The SideTracker view while moving.

## **Get the Whole Picture!**

With The SideTracker, drivers have a clear, wide angle view of the right side of the vehicle and trailer. This greater visibility reduces accident risks and means fewer insurance claims, fewer repairs and reduced downtime.

The SideTracker also keeps the trailer in sight on right turns and when backing to help avoid obstacles.

Authorized dealers can install your SideTracker system in just a few hours and night vision capability is available as an option.
